

CHIROPRACTIC

Itasca Community College-Northwestern Health Sciences University

Chiropractic deals with problems of health and disease from a structural point of view, with special consideration given to spinal mechanics and neurological relationships. It does not utilize drug therapy or operative surgery, but relies on spinal manipulation, clinical nutrition, physiotherapy and hygienic and sanitary precautions in the prevention and treatment of disease. It is a "natural" form of health care. The following 3-year, 90-credit curriculum fulfills the requirements of the Associate in Arts degree.
